Avril/Mai~2015

1 Type abstrait

1.1 Signature

```
Type:
   Multi ^1
Utilise:
   Integer, Boolean, Element ^2
Opérations:
   create_empty: \rightarrow Multi
   is_empty: Multi \rightarrow Boolean
   count: Multi \rightarrow Integer
   occurrences: Element x Multi \rightarrow Integer
   part_of: Element x Multi \rightarrow Boolean
   equals: Multi x Multi \rightarrow Boolean
   join: Multi x Multi \rightarrow Multi
   add_to: Element x Multi \rightarrow Multi
   remove from: Element x Multi \rightarrow Multi
```

1.2 Sémantique

```
Préconditions:
```

```
\label{eq:continuous_series} \begin{array}{l} \forall \ m \in Multi, \ \forall \ e \in Element: \\ remove\_from(e, \ m) \ est \ d\'efini \ ssi \ is\_empty(m) = False \\ \textbf{Axiomes:} \\ \forall \ m \in Multi, \ \forall \ e \in Element: \\ is\_empty(create\_empty()) = True \\ is\_empty(add\_to(e, \ m)) = False \\ \underline{\textbf{Si}} \ is\_empty(m) \ \underline{\textbf{alors}} \ count(m) = 0 \\ \underline{\textbf{sinon}} \ count(m) > 0 \end{array}
```

1.3 Justification des axiomes

^{1.} Multi désigne soit le type List, soit le type Array

^{2.} Element désigne une type générique
